Bootstrap Project Final Report

January 9, 2021

My website for the Bootstrap project ended up even better than I originally imagined it. I made some changes along the way such as redesigning the About page and adding a few more buttons, but it is mostly the same as my original wireframe design. I am pleased with the responsive elements and the parallax effect on some of the images. This project gave me a great deal of useful experience in working with Flexbox, Bootstrap classes and color palettes. One thing I regretfully did not have time for was to convert my CSS to SCSS; I plan to do this on my own after the conclusion of the Bootstrap course. Another thing I began to research but did not have time to finish is how to host a website on GitHub Pages for public viewing. I intend to include this website in my development portfolio.
